WORK EXPERIENCE

Astrum IT Academy

Aug 2021 - Sep 2022

Fullstack Developer

Online Shop

A site that sells a variety of products. It has a convenient interface. Admin page to add products to the site and manage them. I used Laravel Breeze Authentication to register site users. I did the backend in Laravel and the design in Blade. I have created a section for the list of discounted products, and pagination in Laravel so that no more than 20 products are displayed on one page. The data is stored in a MySQL database. I used migrations to manipulate the database state. Eloquent ORM was used to, manipulate get data, process and retrieve to an end user.

Termiz Suv

This project is a full-stack web app. I used Laravel for the backend and Blade for the design. CRUD system was introduced to upload and manage the necessary documents on the backend side. Spatie Role permission to manage the main roles on the app. The data is stored in a MySQL database. I used migrations to manipulate the database state. I used the Laravel UI authentication library to register the users. Add-ons like JavaScript and Ajax are used to create complex design elements and add interactivity.
